

Assembly is a breeze...

Instructions & Tips

1. Place garden mount into the ground by pushing it into the ground or by using a piece of 5/16" x 3 ft. rod. Drive the rod half way into the ground. Place the garden mount over the top of the rod. (If you have the two piece mount, screw together first.)

2. Place the directional over the pole until it stops (approx. 6" from the tip on the 60" one piece mount). Point the N to the north and tighten the screw that is located between the N and E.

3. Slide the windcups onto the pole with the ball bearing side down.

4. Place the design top onto the pole.

- We recommend that you place a few drops of light oil on the top of the pole periodically to ensure that the design top will turn freely.
- If using a roof style mount, we recommend that you ground your weathervane in case of a lightning strike.

This product has been clear coated for additional beauty and durability.

Garden Stake
60" long – pushes into ground or may be used with optional ground stake.

Roof Mount
15" long – conforms to roof pitch.

Deck Mount
15" long – attaches to any horizontal surface with a 3" x 3" mounting plate.

Post Mount
15" long – attaches to any vertical surface with a 3" x 3" mounting plate.
